Game Developer & Level Designer

Level Design | Gameplay Programming | Unreal Engine | Unity | C++ | C#

Game developer making games since 2019, with a focus on level design and a strong programming background. Co-founded an indie studio, led a 12-member team, published a game on Google Play and the App Store, and presented The Book of Glory at Gamescom 2023. I design levels and puzzles around player choice, readable spaces and pacing, and build them in Unreal Engine (C++, Blueprints) and Unity (C#). Professional experience as a data analyst and software developer (WSIB, Ai Financial) adds stakeholder communication, Agile teamwork and data-driven decisions.

Skills

Level and game design: level layout and player flow, puzzle design, pacing and tension, risk and reward, playtesting and iteration, design documentation
Gameplay programming: gameplay systems, enemy AI and pathfinding, multiplayer networking, physics, shaders and visual effects, debugging and profiling
Engines: Unreal Engine 4/5 (C++, Blueprints), Unity (C#), Pico-8 (Lua), OpenGL
Languages: C++, C#, Python, Lua, JavaScript, Java, SQL
Data and web: Power BI, Excel (Power Query, pivot tables), SQL Server, PostgreSQL, MySQL, React, Spring Boot, Android Studio
Tools and process: Git/GitHub, Visual Studio Code, Figma, Jira, Azure DevOps, Trello, Scrum/Agile, Kanban

Game Development Experience

Co-founder, Designer & Game Developer | Nefarious Game Studios, Mexico — Aug. 2019 – Nov. 2023

- Led a 12-member team (programmers, artists, sound designers, animators, QA) with Scrum, holding the design vision
- Designed and programmed core mechanics, systems and events for Colors and The Book of Glory (Unity C#, Unreal C++/Blueprints); published Colors on Google Play and the App Store
- Presented The Book of Glory in a virtual booth at Gamescom 2023
- Ran regular playtests and iterated on the design from player feedback and metrics; wrote design documentation for features and systems
- Implemented custom shaders, lighting and visual effects within performance targets, and debugged gameplay, rendering and networking issues

Student Researcher – Unreal Engine | Centennial College, Toronto, ON — Mar. 2025 – Sep. 2025

- Built a robot simulation in Unreal Engine 5 (C++, Blueprints) for client Four DRobotics: Chaos physics movement, navigation and threat detection across different scenarios
- Delivered to stakeholder requirements, optimized performance-critical code and documented the system architecture

Game Projects

Something 2 Fear | Game Director & Gameplay Programmer (Unity, C#) — 2023

- Designed the core loop of a co-op survival horror game: teamwork puzzles, limited resources and a relentless threat
- Programmed multiplayer synchronization, proximity voice chat, enemy AI pathfinding and PSX-style shader effects

The Book of Glory | Game Director & Gameplay Programmer (Unreal Engine 5) — Gamescom 2023

- Directed a mental-health RPG that moves between daily life and dream worlds; built its dual-world system and rhythm-based combat (C++, Blueprints)

Castle Blocks | Designer & Programmer (Lua, Pico-8) — 2024

- Designed puzzle-platformer levels that reward creative solutions, with difficulty that grows as new block types are introduced; optimized to 60 fps

AceEngine | Custom 3D Renderer (OpenGL, C++) Oct. 2025 – Present

- Building a renderer from scratch: Phong lighting, texture mapping, shader loading and compilation, camera transforms and mesh loading

PROFESSIONAL EXPERIENCE

Data Analyst (Summer Student) | Workplace Safety and Insurance Board (WSIB), Toronto, ON May 2026 – Sep. 2026

- Built and maintained interactive Power BI dashboards that track key performance indicators for stakeholders
- Extracted, cleaned and analyzed large datasets with SQL and Excel; automated recurring reports and documented data sources, cutting manual effort

Student Researcher – Frontend | Centennial College ARIES, Toronto, ON Jan. 2026 – Present

- Gather requirements with stakeholders, turn them into well-structured solutions, and present findings to cross-functional teams

Full-stack Developer Intern | Ai Financial, Richmond Hill, ON Sep. 2025 – Dec. 2025

- Built a full-stack web application (React, Spring Boot) with unit tests and documentation
- Wrote and optimized complex SQL queries across millions of financial records, and added data-validation controls; worked in Scrum with sprint planning and code reviews

App Developer | Grupo Roga, Chihuahua, Mexico Apr. 2024 – Oct. 2024

- Developed microservices and interfaces (Spring Boot, Android Studio, React) and Power BI solutions for operational data
- Improved SQL database performance by 40% through query analysis and indexing, in a Kanban team

Project Manager | Monterrey Institute of Technology, Chihuahua, Mexico Jul. 2023 – Dec. 2024

- Supervised development and evaluated KPIs for a portfolio of 50+ technology startups, and presented recommendations to executives, founders and technical teams

EDUCATION

Game Programming (Co-op) Advanced Diploma | Centennial College, Toronto, ON Jan. 2025 – Dec. 2026

GPA 4.1/4.5 (A)

- Monster's Flow: solo first-person arcade shooter (Unity, C#) with round-based enemy waves, power-ups and several enemy types
- Designed and programmed a full-stack web application for video game backlog management with a team

Bachelor of Computer Science & Technology | Monterrey Institute of Technology, Monterrey, Mexico Dec. 2023
